A/B Testing Plan

Element Change: Add cost per serving to quick recipes

Version A (control): The original quick recipes page. Displays 10 recipes with descriptions, prep times, serving sizes, ingredients, instructions, and tips.

Version B (Treatment/Variable): The same content as the original quick recipes page with the change of an estimated cost per serving on each recipe.

Hypothesis: The users (AI) shown version B will be more likely to click on a recipe than users shown version A.

Reasoning: College students are price sensitive and still have to eat. When they are choosing a meal to make they are also thinking of how much it will cost to make. If it seems like it might cost more or they don't want to calculate the price, they might not click on the recipe. However, with the price per serving displayed they may be more inclined to click.

The hypothesis could be incorrect if there is actually no influence on users interest in the recipes.

The Model: ChatGPT GPT-6

Persona: A price sensitive college student with a busy schedule, limited resources for cooking, and wants a cheap, quick meal. This student values simple ingredients, low prep time, and reasonable food costs that can be found in their area.

Prompt:

25 for version A: regular page, 25 for version B: regular page + price per serving

"You are a budget-conscious college student looking for quick, affordable meals. You have a busy schedule, limited cooking experience, and want meals that are inexpensive and easy to prepare. Review the Campus Cravings Quick Recipes page at the following URL: [INSERT ASSIGNED VERSION A OR B URL]. Based only on the information presented on this page, would you be interested in clicking on one of the recipes to explore it further? Answer yes or no, then give one sentence of reasoning. If "yes", which recipe(s) would you click on."

Primary Outcome: More clicks on recipes/more interest in recipes

Click rate/Interest rate = # of trial users interested in a recipe/total trial users

Sample Size & Stop Date: 50 trials, Before Tuesday, December 1st
